

Gamalytic API 1.0.0 OAS 2.0

[Base URL: `api.gamalytic.com/`]

This API has a free and paid version. **Free users are limited to 250 requests per day and do not have access to all data and features.** Paid users are limited according to their plan (Starter users have 2.5k requests/day while Pro users have unlimited daily requests) and have access to all data within their respective tier. **You need an API key to authenticate as a premium user,** you can generate one in the 'API keys' section at the bottom of your profile page.

In addition to daily request quotas, selected endpoints also have a per-minute limits applicable to all users.

Schemes

game data

GET

/game/{id} returns game details as shown on the game details page

Returns game details as shown on the game details page. **Requires an API key**

Limited to 600 requests per minute

Parameters

Try it out

Name	Description
id ★ required string (path)	item's steam Id id
fields string (query)	comma separated list specifying fields to return. If unspecified, all fields are return, but the best practice is to always explicitly request all the needed fields to ensure consistent performance fields
include_pre_release_history boolean (query)	if true, pre-release history will be returned --

GET

/steam-games/list returns a list of up to 1000 games with some basic information

🔒 ⤴

Returns a list of up to 1000 games with some basic information. **Limited to 30 requests per minute if sorting by a key other than id or revenue. Otherwise limited to 240 requests/minute**

Parameters

Try it out

Name	Description
page number (query)	page index (zero indexed) page
limit number (query)	number of items to return per page (max 1000) 100
fields string (query)	comma separated list of fields to return for each item fields
sort string (query)	sort games by some field sort
sort_mode	sort in descending or ascending order (asc desc)

Name	Description
string (query)	<i>Available values : asc, desc</i> --
unreleased boolean (query)	(deprecated) if true, response will include unreleased games. Unreleased games are not returned by default --
release_status string (query)	Game's release status <i>Available values : all, released, unreleased, early_access, full_release</i> released
price_min number (query)	(requires API key) minimum item price price_min
price_max number (query)	(requires API key) maximum item price price_max
genres string (query)	(requires API key) comma separated list of genres that a game must contain genres
tags (query)	comma separated list of Steam tags that a game must contain tags
tags_exclude (query)	(requires API key) comma separated list of tags that games must not have tags_exclude
features (query)	(requires API key) comma separated list of steam features that a game must contain features
first_release_date_min (query)	date after which games must be released, whether early access or full release (Unix epoch time in milliseconds) first_release_date_min
first_release_date_max (query)	date before which games must be released, whether early access or full release (Unix epoch time in milliseconds) first_release_date_max
early_access_exit_date_min (query)	(requires API key) date after which games must graduate from early access to 1.0 (Unix epoch time in milliseconds) early_access_exit_date_min
early_access_exit_date_max (query)	(requires API key) date before which must graduate from early access to 1.0 (Unix epoch time in milliseconds) early_access_exit_date_max

Name	Description
early_access (query)	(requires API key) set to true if you want to return just the early access games (or false if you want just fully released items) early_access
date_min (query)	(deprecated) date after which games must be released or leave early access (Unix epoch time in milliseconds) date_min
date_max (query)	(deprecated) date before which games must be fully released, or released in early access if still in early access (Unix epoch time in milliseconds) date_max
revenue_min (query)	(requires API key) minimum revenue revenue_min
revenue_max (query)	(requires API key) maximum revenue revenue_max
reviews_min (query)	(requires API key) minimum number of reviews reviews_min
reviews_max (query)	(requires API key) maximum number of reviews reviews_max
followers_min (query)	(requires API key) minimum number of game followers followers_min
followers_max (query)	(requires API key) maximum number of game followers followers_max
wishlists_min (query)	(requires API key) minimum number of game wishlists wishlists_min
wishlists_max (query)	(requires API key) maximum number of game wishlists wishlists_max
sold_min (query)	(requires API key) minimum number of copies sold sold_min
sold_max (query)	(requires API key) maximum number of copies sold sold_max
score_min	(requires API key) minimum review score

    copiesSold
        string]
        integer
        example: 1000
        Estimated units sold. Estimated number of owners who purchased the game
        directly on Steam. This does not include key-activated units.

    revenue
        integer
        example: 5000

```

Estimated gross revenue before Steam cut. Accounts for discounts, regional pricing, returns and chargebacks, but does not account taxes and Steam fee. For paid games, this includes base game sales only. For free-to-play games, this takes into account all revenue sources.

totalRevenue

integer

example: 6000

Total game revenue, including In-App-Purchases and DLCs. Only appears for premium titles with DLCs or IAPs

wishlists

integer

example: 2000

Estimated number of outstanding Steam wishlists

firstReleaseDate

integer

example: 1575522000000

Date when item was officially released on Steam (no matter if early access or full release). Unix timestamp in milliseconds

earlyAccessExitDate

integer

example: 1675522000000

Date when item has officially left Steam Early Access. Only available for items that were in Early Access. Unix timestamp in milliseconds

releaseDate

integer

example: 1675522000000

Date of the full game release, or early access release date if the game is still in early access. Unix timestamp in milliseconds

EAReleaseDate

integer

example: 1575522000000

Early access release date. Only available if item was or still is in early access. Unix timestamp in milliseconds

unreleased

boolean

example: false

true if game is upcoming

earlyAccess

boolean

example: false

true if game is currently in early access

}

publishers	[
	example: List ["Valve"]
	Game's publishers as listed on Steam
copiesSold	string]
	integer
	example: 1000
	Estimated units sold. Estimated number of owners who purchased the game directly on Steam. This does not include key-activated units.
players	integer
	example: 2000
	Estimated number of owners who played the game at least once. This includes games bought on Steam, activated with Steam keys, bought in bundles etc.
owners	integer
	example: 4000
	Estimated number of Steam users who own the game. This number may be inflated due to giveaways, bundles, free weekends etc. so it's preferred to use players or copiesSold in most cases
revenue	integer
	example: 5000
	Estimated gross revenue before Steam cut. Accounts for discounts, regional pricing, returns and chargebacks, but does not account taxes and Steam fee. For paid games, this includes base game sales only. For free-to-play games, this takes into account all revenue sources.
totalRevenue	integer
	example: 6000
	Total game revenue, including In-App-Purchases and DLCs. Only appears for premium titles with DLCs or IAPs
estimateDetails	{
	description: Player estimates by different estimation methods (relative to players metric)
	}
	example: OrderedMap { "rankBased": 15322140, "playtimeBased": 13324589, "reviewBased": 20427660 }
wishlists	integer
	example: 2000
	Estimated number of outstanding Steam wishlists
firstReleaseDate	integer
	example: 1575522000000
	Date when item was officially released on Steam (no matter if early access or full release). Unix timestamp in milliseconds
earlyAccessExitDate	integer
	example: 1675522000000
	Date when item has officially left Steam Early Access. Only available for items that were in Early Access. Unix timestamp in milliseconds
releaseDate	integer
	example: 1675522000000
	Date of the full game release, or early access release date if the game is still in early access. Unix timestamp in milliseconds
EAReleaseDate	integer
	example: 1575522000000
	Early access release date. Only available if item was or still is in early access. Unix timestamp in milliseconds
unreleased	boolean
	example: false
	true if game is upcoming
earlyAccess	boolean

	<i>example: false</i>
	true if game is currently in early access
countryData	{ description: Estimated country split in % (2 letter ISO 3166 country codes) }

GameHistory {
  timeStamp
    integer
    example: 1420070400000
    Timestamp in UNIX epoch format in milliseconds

  reviews
    integer
    example: 292666
    Number of recorded Steam reviews (only counts reviews marked as 'purchased on Steam')

  price
    number
    example: 7.49
    Recorded final price in USD (includes discounts)

  score
    integer
    example: 93
    Steam's 'recent' review score recorded on the given date

  players
    number($float)
    example: 183683.687
    Average daily CCU

  avgPlaytime
    number($float)
    example: 1.0237
    Average estimated playtime in hours

  sales
    number($integer)
    example: 10129448
    Estimated cumulative units sold on a give date

  revenue
    number($integer)
    example: 750738
    Estimated cumulative revenue on a give date

  followers
    number($integer)
    example: 1000
    Number of followers on a give date

  wishlists
    number($integer)
    example: 5000
    Estimated outstanding wishlists on a give date
}
